

Continuous Variance-Weighted Submap Joining Framework

Local Submap Construction

Sufficient Statistic Training Data Construction for Local Submaps

Raw Sensor Data

Dividing the Data into L Submaps Based on Frames

Building Sufficient Statistic Training Data per Submap

$$\mathcal{D}_l = \{(\mathbf{x}_i, Z_i, n_i)\}_{i=1}^{M_l}$$

Heteroscedastic Bayesian Occupancy Mapping

Continuous Occupancy Construction

Exact Closed-form Posterior Mean & Covariance

Iterative Updates

Sparse Relative Vector & Noise Optimization

Variance-Weighted Submap Joining

Variance-Weighted Global Map Construction

Continuous Nonlinear Least Squares Formulation

Efficient Solution via Schur Complement

Closed-Form Solution for Optimal Global Map
